Voyager Evolution (Available in 17-2 & 16-10 Versions)

The Voyager further pushes the boundaries of accepted sea kayak design and represents the final 'Evolution' of the; Buccaneer, Polar, Ocean, 'development' series of models. It is Mike Nelson's retirement present to the world of sea kayaking, combining everything he wanted in a modern sea kayak design and that he spent 40 years experimenting to develop.

To even the casual observer, the difference between the Voyager and traditional kayak designs can be seen in the chine area down each side of the kayak. The detailed

sculpting of this area; soft at the front, hardening towards the middle, then cutting away into the wings just behind the hips, this all took a lot of development to get right. These unique features create a fast, stable hull, with excellent edging ability. This coupled with a low-profile deck, designed to shed water and offer very low windage, will help keep you in control, even in the worst of sea and weather conditions.

The Voyager gives experienced paddlers, the edge control and low-windage of a Greenland-style kayak, but keeps the speed, load carrying and rough water handling of more contemporary designs. It giving those who paddle it, unrivalled confidence to go and explore the Oceans of the world.

Unique Design Features

Craftsman Made In The UK

40 Years In Development

Specifications	Recommended Paddler Weight*	Kayak Length	Kayak Width	Kayak Weight	Max Internal Deck Height
Voyager 17-2	70-120kg 155-265lbs	523cm 17' 2"	54.5cm 21 3/4"	25kg 55lbs	31.5cm 12 1/2"
Voyager 16-10	40-90kg 90-200lbs	513cm 16' 10"	54cm 21 1/2"	24kg 53lbs	29cm 11 1/2"

*Recommended Paddler weight is only given as a guide, as it is very dependent on experience, the fit you prefer and the amount of other kit being carried.
